Technion's TeenTech competition aims to expose young technological entrepreneurs to Israel – a scientific and technological world leader. Young, willing, and highly motivated boys and girls, who have “what it takes” to confront cutting edge digital technology, may partake in this exciting endeavor. The journey to Israel, and participation in the competition, will be the beginning of an ongoing intellectual and emotional bond. Those who choose to participate will be exposed to the very best minds in Israel, ones that made it what it is known as today - **The Start-Up Nation**.

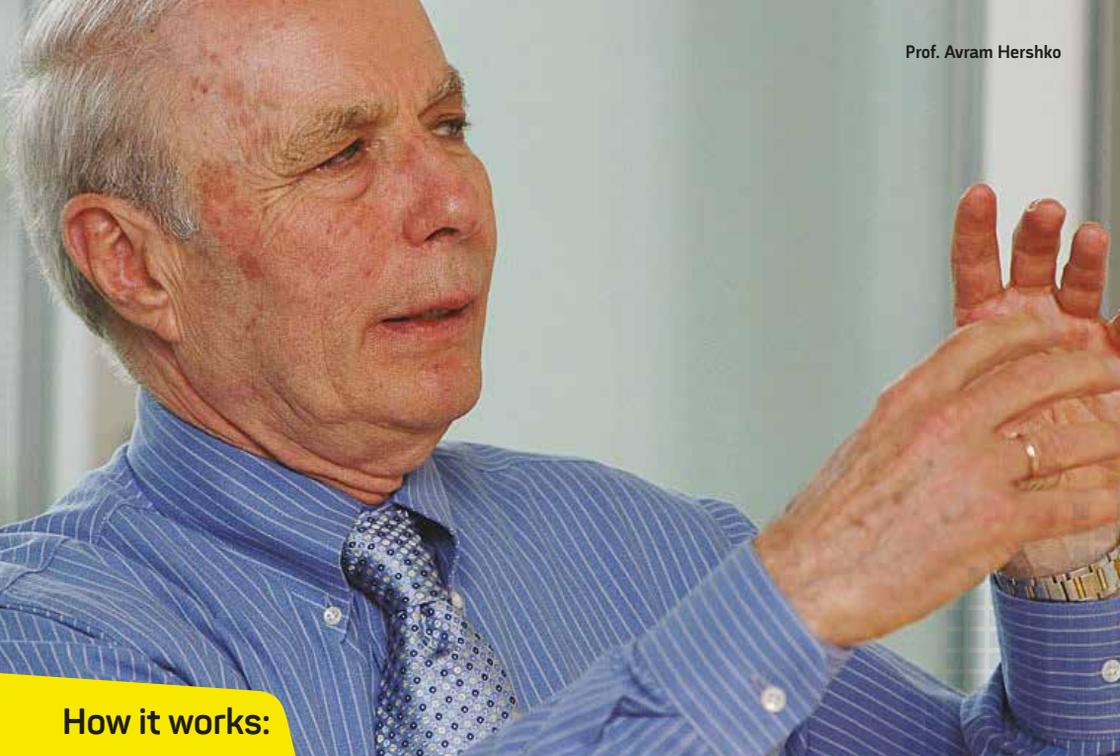

Mission of the Teen Tech program

Inspire technological innovation and entrepreneurship in young adults

Create a long lasting connection between youth from all over the world through amazing examples and case studies of innovation and entrepreneurship.

Raise awareness of Israeli leadership in technology and attract bright young minds to consider it a destination of choice for study and scientific collaboration

How it works:

Schools from around the world chose their candidates.

A committee, headed by **Nobel Laureate Prof. Avraham Hershko**, and comprising top researchers and academic representatives, will choose candidates based on technological achievement, social activity and awareness, academic recommendation and community endorsement.

60 young adults between the ages of 16 and 18 years of age will take part in Teen Tech 2017 half of whom will be International participants.

Over the course of 10 days, teams will get to know one another, experience life in Israel and Haifa, meet scientists, researchers and representatives of Technion and Rambam Hospital, as well as Hi-tech start-up companies.

International participants will be hosted by Israeli participants and their families.

Participants will be divided into mixed work groups. Each group will be assigned a mentor, and given a mission to generate and promote innovative solutions to medical and healthcare issues.

The competition will be refereed by a professional committee of the highest scientific level.

All participants will be invited to continue the innovative activity in a **virtual technological incubator** designated exclusively for alumni of this program. This "exclusive club of young entrepreneurs" aims to encourage ongoing relationships between participants and mentors after the completion ends.

Selected participants will meet Prof. Hershko for a Q & A session.

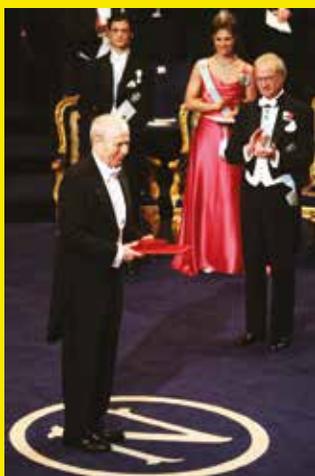

PROGRAM
