BSc in Biotechnology and Food Engineering

Study in English at one of the world’s leading institutes for Innovation in Science & Technology - at our campus in China

Technion has a new campus in China - Guangdong Technion Israel Institute of Technology. The establishment of Guangdong Technion will usher in a new era of education, research, and innovation in engineering and life sciences. The vision of Guangdong Technion is to be a world-class international technological university campus, carrying out cutting-edge research that will encourage entrepreneurship and technology transfer.

Think about the world’s future.
Think about your future.
Think Guangdong Technion.
The BSc program in Biotechnology and Food Engineering

The Program of Biotechnology and Food Engineering (BFE) is one of few in the world that combines a unique merge between engineering-technology research and fields in life sciences.

The BFE degree trains engineers in two areas: biotechnology and food. The program provides a unique combination between engineering and technological fields and areas of natural and life sciences, in particular, biotechnology. Working with biological materials is common to both fields and provides a basis for core courses in engineering and technology.

Tuition:
$15,000 USD / yr
( does not include housing and utilities)

Merit-based partial scholarships are available.

Program starts in August.
