Study in English at one of the world’s leading institutes for Innovation in Science & Technology - at our campus in China

Technion has a new campus in China - Guangdong Technion Israel Institute of Technology. The establishment of Guangdong Technion will usher in a new era of education, research, and innovation in engineering and life sciences. The vision of Guangdong Technion is to be a world-class international technological university campus, carrying out cutting-edge research that will encourage entrepreneurship and technology transfer.

Think about the world’s future. Think about your future. Think Guangdong Technion.

BSc in Chemical Engineering

Study in English at one of the world’s leading institutes for Innovation in Science & Technology - at our campus in China

The BSc program in Chemical Engineering

The global chemical industry produces thousands of products that are needed by people today. Chemical engineers are key members of all branches and activities of this industry. Chemical engineers deal with a variety of areas: energy (power plants, renewable, solar), water treatment (desalination, wastewater treatment), polymers, microelectronics, nanotechnology, pharmaceutical and biotechnology, petrochemicals, security, environmental quality, and more. The chemical engineer is involved in related processes from initial design to the finished product. Change is at the heart of chemical engineering; the industry changes the structure of materials to arrive at useful or valuable products.

Tuition:
$15,000 USD / yr
(Does not include housing and utilities)

Merit-based partial scholarships are available.

Program starts in August.
