BSc in Materials Science and Engineering

Study in English at one of the world’s leading institutes for Innovation in Science & Technology - at our campus in China

Technion has a new campus in China - Guangdong Technion Israel Institute of Technology. The establishment of Guangdong Technion will usher in a new era of education, research, and innovation in engineering and life sciences. The vision of Guangdong Technion is to be a world-class international technological university campus, carrying out cutting-edge research that will encourage entrepreneurship and technology transfer.
The BSc program in Materials Science and Engineering

Material Science and Engineering is an advanced area of study that has been penetrating a variety of industries at record speed. The materials engineer chooses materials suitable for various engineering applications; is involved in R&D of materials from the nuclear through the molecular levels; researches, develops, and implements processes, as well as product quality and reliability assurance; improves material properties; investigates product failure; applies advanced analytic methods; and manages technology. Specialization areas include: metallurgy and metallic materials, electronic materials, ceramic materials, polymers and plastic materials, complex materials, environmental protection of materials, and methods of characterizing material.

Tuition:

$15,000 USD / yr
(does not include housing and utilities)

Merit-based partial scholarships are available.

Program starts in August.
